iGarden Vision™ - Design

The iGarden Vision™ brings the best products and technological advancements together. This allows stunning contemporary outdoor spaces to be designed and constructed.

For new builds, or simply to replace old decking and patios, you can design and build a unique, functional, usable **and truly low maintenance** outdoor space.

Choose the main elements from

- a hand-picked range of specialist outdoor porcelain tiles
 - the best in modern, safe, low-voltage lighting

Optional finishes include a range of contemporary 'dressing modules'. Artificial grass, seating, raised planters, rills water features and firepits. Outdoor kitchens, gazebos and arbours can also be easily incorporated.

A beautiful and harmonised look can be created with simplicity and ease.

Sharp detail, clean edges, distinct and separate areas can be majestically showcased using subtle lighting to create a look different to anything else in the marketplace.

The iGarden Vision™ is unique. It gives leading-edge design possibilities and is genuinely cost effective.

As a team, we can work with you to bring your vision alive.

DESIGN & VISION

The iGarden Vision™ modular system is the best solution to today's modern 'urbanscape' designs.

Choose from a hand-picked range of outdoor products ranging from the best porcelain tiles through to world class lighting.

Add optional extras from a choice of stunning finishes - artificial grass, seaters, planters, rills, firepits etc.

The Garden Vision™

The  Garden Vision™ revolutionises the way your outdoor space is designed **AND** built!

At the heart of the system is the load-bearing base module.

Spreading loads to ensure structural stability AND dimensional accuracy the result gives a **quality and stunning finish far superior to any traditionally laid patio or decking.**

The unique framing structure suits almost all foundation arrangements and differing ground conditions. Whether flat, sloping or a combination of both, the framing will cope perfectly.

Its base module completely replaces traditional labour-intensive heavy groundwork processes. It avoids the need to 'dig out tons of soil, back fill with more tons of hardcore, and then lay even more tons of concrete! All so you can top off with a 'porcelain tile finish'.

It's a modern, lightweight galvanised steel frame created in the UK by Invenire Design (<https://igardenvision.co.uk/>).

Working with garden designers, lighting specialists, landscapers and fabricators, the system draws together the best parts from the marketplace in function, form, technology and expertise.

It's a better way...in every respect!

BASE MODULE

The unique and patented framing structure.

- Structurally stable
- Dimensionally accurate
- Capable of spreading loads evenly
 - Self draining
- Suiting nearly all foundation requirements
 - Greener solution with less waste
 - Recyclable and changeable
- The modular system also allows natural drainage to the sub surface

Bringing the 'indoors out' and the 'outdoors in'!

Harmonising the outdoor space **WITHOUT** the traditional groundwork normally associated with large patios.

Your vision, your design, your reality!

Dining areas, lounging areas or play areas?

Steps, lawns, outdoor kitchens, pizza ovens and barbecue areas? Waterfalls, rills or firepits?

Your vision, your design, your reality!

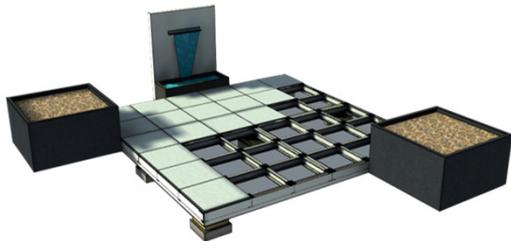

If you want a seamless transition between the house and the outdoors it can be achieved.

From your kitchen, orangery or conservatory, you have visual continuity and then you simply step outside to a high quality and beautiful outdoors.

It's simple, modern, enviable, classy , clean, and smart.

It's also very easy to maintain and with outdoor grade porcelain and low voltage lighting the end result is true quality.

From your design to the finished result the process is simple.

YOUR VISION

Stretching and matching your space is easy.

Whether at new or existing properties, we can blend the iGarden Vision™ to match.

We have all the modular products.

Porcelain tiles, lighting, seating planters and accessories can all be combined to match the outcome you seek.

Sharp, clean lines, easy maintenance and fabulous high quality finishing.

Lighting completes the 'wow' factor, extends the day into the evening and adds safety too!

THE PROCESS

A modular garden system built within your outdoor space.

Together we design and utilise the key modular elements to achieve your bespoke look.

Aiming for practicality in every case, we incorporate simplicity, geometric lines and work to achieve your vision.

We ensure safe low-voltage lighting is designed **and** embedded to enhance the feel and create stunning visuals. We also consider safety lighting on features such as steps to reduce trip hazards during the autumn and winter darkness.

We help with practical advice from initial survey, through lighting design, then topping it off with 'designer dressing' to achieve that 'lifestyle' look.

You visualise the outcome. We work with you and deliver the plan.

Add contemporary free standing structures such as gazebos or arbours with ease.

Lighting adds stunning or subtle effects and enhances the visual impact.

We always consider safety and build it into every design!

The final finish results in high quality, dimensional accuracy and precision.

Traditional construction just can't compete!

Create interest with great design!

Maybe an Instagram image, magazine article or just great imagination will give inspiration!

You have the ideas. We turn them into reality.

Different coloured tiles, steps and beautiful lighting extends those balmy summer days.

We help you consider

- Border finishing
- Water features such as fountains, rills, blades
- Structures for shade or effect such as arbours or gazebos
- Planting areas and irrigation

We concentrate on the technical stuff. Structure, loads, dimensions, foundations, lighting and build.

You concentrate on your vision and 'dressing products' such as

- Contemporary planters
 - Seating
 - Fire pits
- Water features
- Outdoor kitchens or barbecue areas.

Just ask us and we'll fit it in!

CREATING SHAPE

Different levels in the garden?

With the modular system it's far easier than a traditional build!

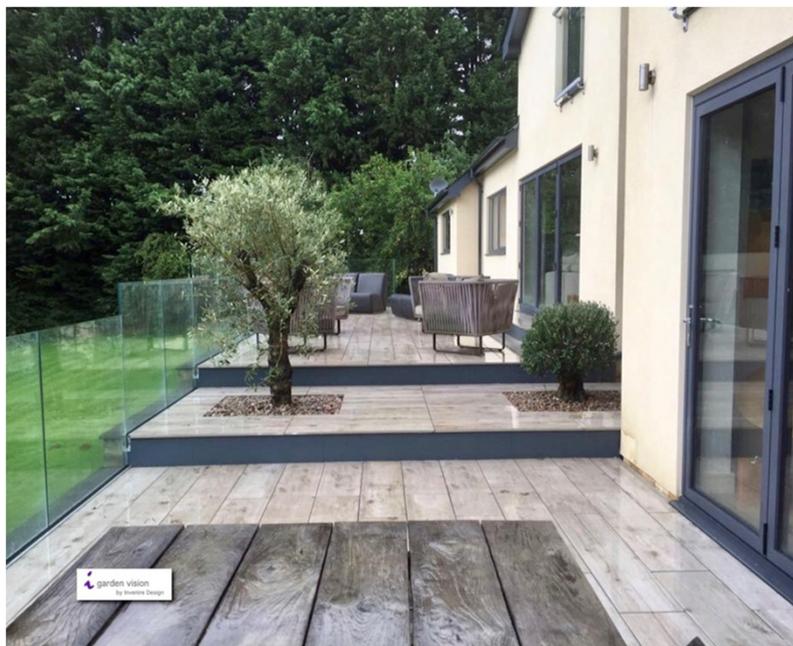

Lighting adds the 'wow' factor and during dark autumn and winter evenings adds an aspect of safety.

The contemporary system works fabulously with square/rectangular and geometric designs.

Intimate areas and pockets of interest can easily be created to give inspiration and fulfil your vision.

FINISHING & DRESSING

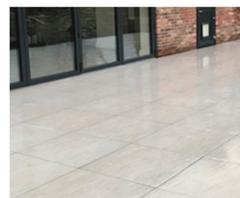

As soon as the base modules and 'shape' are committed then adding value to the visuals becomes easy. We'll help with ideas if needed.

Finishing and 'dressing' your outdoor space completes the stunning look. Choose your porcelain tiles, contemporary seating, planters, shrubs, trees, decorative gravels. The list is almost endless.

Utilise different colours and textures to enhance the overall look creating interest and great visuals.

STRUCTURES

Pick from the modules – tiles, lights, seating, planters or let us suggest and design them all in for you.

Found something unique? We can add it to the design to create that special look.

Porcelain - Sharp, Clean and Easy To Maintain

The **iGarden Vision™** modular system has been specifically developed to accommodate a hand picked range of outdoor porcelain tiles.

They are fully suited to the northern hemisphere climate (high summer and freezing winter temperatures) and are totally frost proof.

They have inbuilt slip resistance*!

They resist mould and algae build up, and a simple wipe keeps them clean and looking sharp.

They are tough, can stand impact more than natural stone and can easily be lifted to access underground services such as drainage, manholes, cables etc.

Unlike natural stone they don't lose their finish.

We have chosen different styles and sizes to suit all tastes. The variations are almost limitless.

Choose from our **iGarden Vision™ porcelain options of**

**Classic
Classic Plus
Premium**

OUTDOOR PORCELAIN

Simple to Maintain

Outdoor porcelain is as close to being maintenance-free as any tile can get. Resisting mould and algae they simply need a wash and wipe to clean them and bring back that new look. Natural stone just cannot compete even when it has been 'sealed'.

Affordable, Technically Superior and Self Draining

Even when ignoring future low maintenance costs, porcelain outdoor tiles are still one of the most cost-effective surfacing options available.

Using the **iGarden Vision™** modular system the result is a technically superior finish to traditionally laid tiles. Tiles laid on a traditional concrete base cannot drain at all; however the **iGarden Vision™** modular system allows natural drainage to the sub-surface and pooling can easily be handled after a shock downpour.

Durability and clean lines remain throughout.

Design Potential and Choice

You can customise colour and add texture to any garden design. Use different tiles for different areas giving clear visual separation where needed. Choosing colours to compliment your flowers or patio furniture or add visual texture is also possible.

Contrasting shades to highlight features in your property are all within easy reach and are just the beginning of design possibilities. The choice from the hand picked range caters for all tastes and styles.

** A full list of benefits is shown separately.*

OUTDOOR PORCELAIN

Using the iGarden Vision™ modular system the result is a technically superior finish to traditionally laid tiles.

There are many advantages over a traditionally laid patio. Some are listed alongside.

As an example, tiles laid on a traditional concrete base cannot drain storm water at all!

Those bedded on mortar have limited drainage as well.

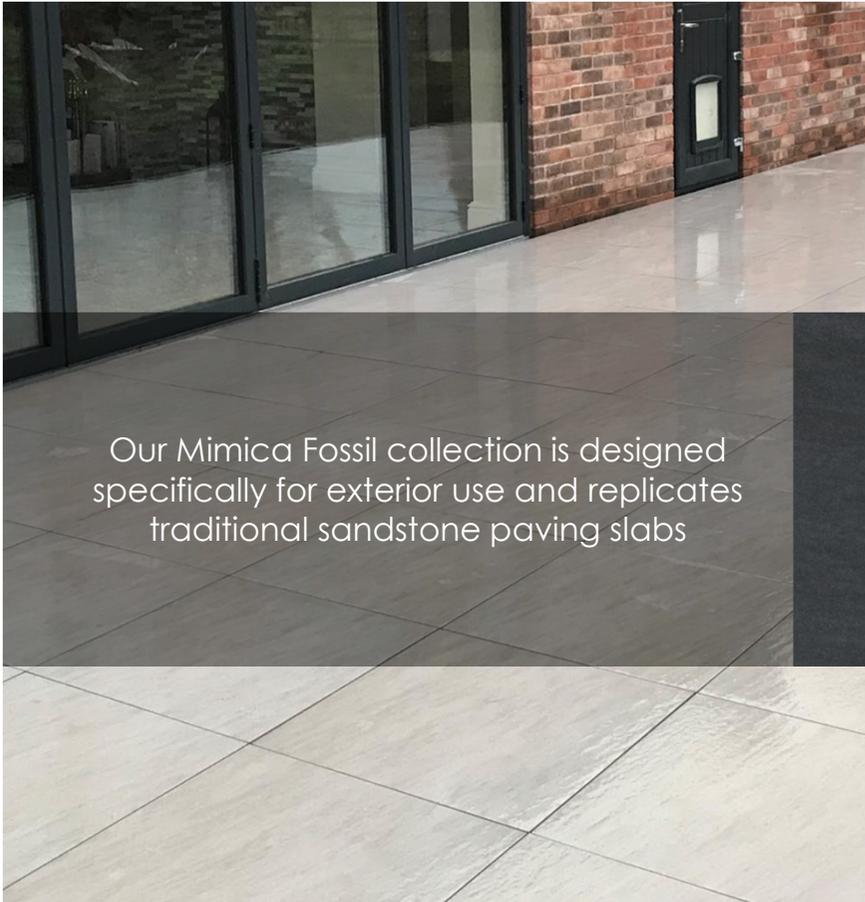

Water has to be channelled into storm water drainage systems or soakaways built into the core design.

However the iGarden Vision™ modular system allows natural drainage to the sub-surface and pooling can easily be handled after a shock downpour. This reduces or avoids the need for specialist storm water drainage.

Benefits of the iGarden Vision™ and Porcelain Tiles

- ✓ Keeps that 'beautiful new finish' with no fade. Durability and clean lines remain throughout
- ✓ Resists mould and algae
- ✓ Easy to maintain with a simple wipe clean process
- ✓ Natural drainage to the sub-surface via the modular system unlike non porous traditional concrete lay
- ✓ Slip resistance of R11
- ✓ Outdoor grade quality to suit the northern hemisphere
- ✓ Incredibly durable and more so than natural sandstone
- ✓ Stain resistant
- ✓ No need for annual 'sealing' to preserve colour and stain resistance
- ✓ Calibrated to precise specifications allowing 'mm' perfect finishes with sharp and clean lines
- ✓ Using the modular system impressive finish throughout
- ✓ Can be easily lifted to gain access to cables and services
- ✓ No periodic grouting or 'grout lifting'
- ✓ Easier to lay with precision levels and sharp lines.
- ✓ No 'rockers' or recalls for slabs that have shifted through ground heave.

OUTDOOR PORCELAIN

Our Mimica Fossil collection is designed specifically for exterior use and replicates traditional sandstone paving slabs

MIMICA FOSSIL RANGE

OUTDOOR LIGHTING

Low Voltage Outdoor Lighting – Designed Explicitly For Outdoor Use

Design & Support

Full dedicated lighting design and support comes with the system. Lighting design requirements, lighting effects, installation and post-installation advice are all included.

Lighting will make your iGarden Vision™ pop, you will love it and be proud to show it! The design will consider safety too, for example where steps and dark areas need to be lit.

Multi Year Guarantees

All our 12v products are safe and are easily installed into any iGarden Vision™ modular system. It's been thought through and designed in from the outset.

All products have either 3 or 5 year guarantees as they are built for outdoor use.

None of the lights are low cost 'solar' units!

Choice and Quality

The hand-picked outdoor lighting provide the best solutions available today from leading European suppliers.

All products are safe and utilise efficient, low running cost LED's and are not low cost 'solar' solutions.

ARTIFICIAL GRASS

Our Artificial Grass collection is designed specifically for the

iGarden giving it, density, durability, softness and a realistic appearance.

i25 a quality short-pile grass designed for general landscaping and ideal for areas that are hard to maintain such as banks and heavy traffic areas

i30 a stunning, soft, mid-range grass that is perfect for gardens that have children and dogs as it is hard-wearing and easy to keep clean

i40 a luxury grass that is amazingly realistic. Very soft to the touch but also very durable, this is our best selling grass in the range

i40 plus a fantastic new product that has twice as many stitches per sq m than any other grass currently on the market. It feels like a carpet to walk on and looks stunning

LOW MAINTENANCE

Low Maintenance GRP!

Glass-reinforced plastic (GRP) is a fibre reinforced polymer made of a plastic matrix reinforced by fine fibres of glass.

GRP is lightweight, extremely strong, robust, corrosion resistant, water tight **and is low maintenance.**

It makes a highly attractive option compared to more traditional materials like timber or metal. No rust, no painting, no wood rot!

GRP is simply maintained with a soft cloth and warm water.

GRP products are a perfect addition providing the additional contemporary touches to make your perfect outdoor space and 'Pinterest' garden.

GRP is easily moulded into a wide variety of designs making it suitable for both standard and more bespoke applications.

GRP PRODUCTS

Your Design?

GRP allows bespoke items to be tooled and manufactured, with no limits on size, shape or finish.

This gives designers, or you, creative freedom to create something truly unique.
